Lmanage Mapview Command

Hugo Selbie | June 1, 2021

- INI file location
- Output file save location
- File path to where your local repo of LookML exists
- (Optional) specific table or field If you want to prefilter the returned data

Submit mapview command → **Declare variables** → **Get a list of Stored Content from Looker** → **Iterate over the content elements and parse SQL from each element**

LookML sql_table_name match the parsed SQL table name — Yes → **Add data to the returned used tables or fields column** → **Return CSV of data or pandas df**
